

During our daily maths groups, children practice quick re-call of number facts, these are known as 'Learn It's'. All children are assessed on their 'Learn It's' on a regular basis in class. The number facts that they get tested on will vary depending on what stage they are at. Below are the different steps and the number facts that they are expected to know at each step. The focus is on quick re-call within a set amount of time. The number facts will be in random orders on the assessment sheets.

Please help your child to learn the following number facts to help them progress further through the Learn It's Challenges which will also support them when calculating larger numbers.

Websites: Hit the Button and HWB have good activities to encourage quick mental recall

Step 1 - 20 second timed test.

$1 + 1$	$2 + 2$
